Portfolio Web Explanation

Norah Soliman Alhosain — 4311085

1. Project Overview

A three-page personal site built entirely with **HTML5 and custom CSS**. To meet the requirements, I didn't use any frameworks, templates, or JS. The goal was to create a professional academic home for my profile and certificates that’s fast, accessible, and responsive across different screen sizes.

2. Color Palette & Typography

The color scheme uses deep pink (#C2005A) as the primary brand color, purple (#7B2FBE) for secondary headings, and gold (#F5C518) as an accent for active states and badges. The background is a soft blush (#FFF5F9) to keep the overall feel warm and personal. Headings use Georgia/Palatino for an editorial tone; body text uses Century Gothic for clean legibility.

3. Layout & Structure

I used both Flexbox and CSS Grid as required. Flexbox is used for the navbar, hero section, contact boxes, and anywhere elements need to sit in a row and align naturally. CSS Grid is used for the cards layout (interests and goals), the two-column profile layout, the certificate image gallery, and the contact page.

Responsiveness is handled with two breakpoints: 600px (two-column card grid) and 900px (three-column cards, two-column profile and contact layouts). Below 600px everything stacks into a single column. See Appendix

4. Accessibility

- Skip-to-main link on every page (visible on keyboard focus)
- aria-label on nav, aside, and all unnamed regions; aria-current="page" on active nav link
- aria-hidden="true" on decorative elements; role="list/listitem" on card grids
- All images have descriptive alt text; form inputs linked to labels via for/id
- required and aria-required on all mandatory form fields

5. Changes from Wireframe

The wireframe planned 4 hobby cards revised to 3 for a cleaner grid. An Achievements section was planned but removed from the final profile to keep the page focused. A certificate image gallery was added (not in the wireframe) to showcase real achievements.

Appendix:

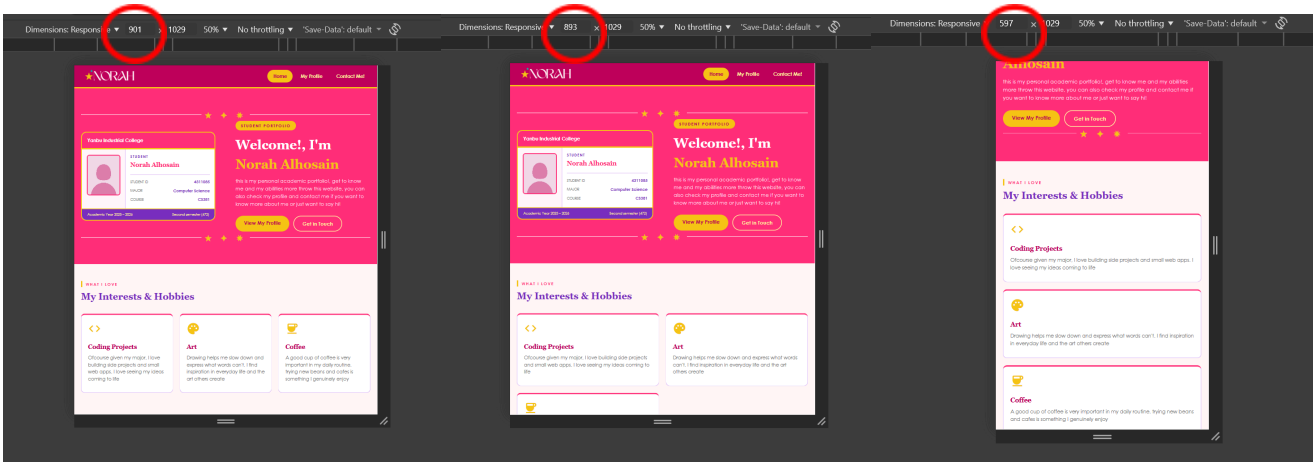

Figure A1: Responsiveness.
